

# A Breakthrough in Satellite Messaging

**DELORME**

Lead. Don't Follow.

## The DeLorme® inReach™

### Assured 2-way communication, anywhere in the world

The inReach keeps you connected, sending and receiving vital information in all the places where cell phones and one-way satellite messengers fail.

#### By itself, it's a multi-purpose GPS communicator

- Pre-load up to three check-in messages for pushbutton delivery
- Designate delivery to email addresses, cell phones, Facebook, or Twitter
- Send SOS alerts with your GPS location; button lock prevents false alarms
- Receive delivery confirmation for all messages and SOS alerts via LED
- Let others track your progress online for mutual peace of mind

#### Pair it with a DeLorme PN-60w GPS for 2-way text messaging

- Compose messages up to 160 characters on the GPS' internal keyboard
- Send to email, cell phones, Facebook, and Twitter
- Receive return messages on your PN-60w from cell phones or email contacts
- You can also communicate directly with other inReach users
- Send SOS messages describing your emergency so responders can prepare accordingly

#### Iridium Connected

Iridium is the world's furthest-reaching satellite network with pole-to-pole global coverage and two-way communication capabilities that other satellite systems can't match.

Available October 2011.

DeLorme inReach and PN-60w GPS connect wirelessly
