DeLorme Earthmate GPS Receivers Now Compatible with MyTopo Terrain Navigator Software

DeLorme Earthmate PN-Series GPS waypoints and tracks can now be imported and displayed in MyTopo Terrain Navigator software. New capability supports growing community of first responders and rescue volunteers who rely on both product lines.

YARMOUTH, Maine — (January 13, 2010) — DeLorme, the innovation leader in mapping, GPS, and GIS technology, today announced a significant new compatibility between DeLorme [Earthmate PN-Series](#) handheld GPS receivers and MyTopo's *Terrain Navigator* software suite.

Now, GPS waypoints and tracks collected on the PN-Series devices can be easily imported and displayed within Terrain Navigator map data.

This announcement represents a “best of both worlds” scenario for law enforcement, search and rescue volunteers, and others who rely on both *Terrain Navigator* mapping software and Earthmate PN-Series receivers.

PN-Series users can now simply save the waypoints and tracks onto an SD card in a .gpx file format. Terrain Navigator Pro will then import and directly display the waypoint and track files, which can be saved for a multitude of reference and planning needs.

“This simple enhancement is excellent news for both DeLorme and MyTopo,” said Jim Skillings, DeLorme Vice President, Business Division. “We can now provide users of Terrain Navigator software with direct access to our fast-growing portfolio of PN-series GPS technologies.”

“MyTopo is pleased that DeLorme has made changes to its GPS device to allow interoperability with our Terrain Navigator software,” added Kevin Toohill, CEO of MyTopo. “This will be welcomed by those who rely on both our products in the field.”

The DeLorme firmware solution avoids additional processing for format conversion. This is particularly important in time sensitive applications such as search and rescue.

Existing PN-Series users can download a free firmware [update](#) (Version 2.7) to enable the needed .gpx file saving capabilities. Henceforth, any PN-Series devices purchased with DeLorme XMap 7 software will already have the firmware update installed.

About DeLorme

DeLorme is the long-time leader in innovative mapping and GPS solutions for both consumer and professional markets. Based in Yarmouth, ME, DeLorme offers a unique set of core competencies across the complex areas of map data creation and management, software development, and integration with GPS.
